LANGUAGES

* English (Intermediate)

* Kannada (Intermediate)

* Hindi (Intermediate)

PROFESSIONAL SUMMARY

Aspiring Full-Stack Developer and Cybersecurity Enthusiast with hands-on experience in building secure, scalable web applications. Skilled in backend development, modern frameworks, and security tools. Proven leadership experience through internship projects. Strong problem-solving mindset with a passion for ethical hacking and innovative technology solutions.

TECHNICAL SKILLS

Languages: HTML5, CSS3, JavaScript, Python, JAVA, Rust

Frameworks & Libraries: React.js, Node.js, Bootstrap

Databases: MongoDB, MySQL, Firebase

Tools & Platforms: Git, GitHub, VS Code, JIRA, Netlify

PROFESSIONAL EXPERIENCE

Backend Developer & Team Leader (Intern)

BITS Pvt Ltd, Belagavi

Led a development team and successfully delivered (2 projects)

Designed and implemented backend architecture and APIs

Managed database integration and ensured efficient data handling

Applied secure coding practices to enhance application safety

Improved team productivity through effective task coordination

PROJECTS

RweezyOS — Custom Linux Distribution & Kernel Engineering

Tech Stack: Linux Kernel, C, Rust, Bash, Python, GRUB, systemd, Docker

Built RweezyOS, a custom Linux distribution focused on operating-system development, Linux internals, and low-level systems engineering.

Modified and integrated Linux kernel components to introduce Rweezy-specific system functionality and kernel/userspace interfaces.

Developed reproducible OS build and configuration workflows using shell scripting and automated system configuration.

Implemented and integrated system services with a focus on kernel/userspace interaction, system initialization, and Linux internals.

GitHub: <https://github.com/RihanMujawar/rweezyos>

LLM From Scratch — Transformer Training & Post-Training

Tech Stack: Python, PyTorch, Transformers, CUDA

Implemented a Transformer-based language model from scratch, including tokenization, embeddings, causal self-attention, multi-head attention, MLPs, transformer blocks, and autoregressive generation.

Built end-to-end LLM pretraining pipelines covering dataset preparation, batching, checkpointing, evaluation, and text generation.

Implemented supervised fine-tuning and preference/RL-based post-training workflows for experimenting with model alignment techniques.

Developed training workflows supporting CPU and GPU environments for accessible model experimentation.

Implemented and experimented with modern techniques including reward modeling, DPO, PPO, and GRPO/RLVR-style training.

Focused on understanding and implementing the internal architecture and training lifecycle of modern language models.

GitHub: <https://github.com/RihanMujawar/train-llm-from-scratch>

Rweezy — Distributed Multi-Service Marketplace

Tech Stack: React 19, TypeScript, Kotlin, Jetpack Compose, Node.js, PostgreSQL, Docker, Twilio, Mapbox
Architected a microservices-based marketplace backend decoupled from a React 19 web frontend and native Android application.
Implemented Nginx load balancing for traffic routing and high-availability service deployment.
Developed geolocation-based merchant discovery, real-time driver tracking via WebSockets, and live ETA routing using Mapbox.
Engineered a stateless authentication architecture using HTTP-only dual-token cookies, rate limiting, and mandatory Twilio SMS OTP verification.
Built a native Android client using Jetpack Compose with background Firebase Cloud Messaging (FCM).
Containerized the complete ecosystem using Docker and Docker Compose, including automated database/demo seeding.
GitHub: <https://github.com/RihanMujawar/rweezy>

End-to-End Encrypted (E2EE) Messaging Web Application

Tech Stack: Node.js, WebSockets, MongoDB, Web Crypto API, ECDH, AES-GCM, HKDF
Developed a real-time secure messaging platform using Node.js and WebSockets with sub-100ms message delivery latency.
Implemented client-side End-to-End Encryption (E2EE) using the Web Crypto API, preventing the server from accessing plaintext message content.
Designed an asymmetric key-exchange mechanism using ECDH and encrypted message payloads using AES-GCM 256-bit encryption.
Implemented HKDF-based cryptographic key derivation for secure session-key establishment and cryptographic isolation.
Designed and optimized a MongoDB schema with indexing for high-throughput message storage and secure session-state management.

My AI 007 — AI Personal Assistant & Automation Platform

Tech Stack: Python, Gemini API, React, JavaScript
Developed a hands-free AI desktop assistant combining a Python automation backend with a React-based interactive frontend.
Integrated the Gemini API to interpret natural-language and voice commands and translate user intent into executable local system tasks.
Engineered low-latency voice input and text-to-speech pipelines using JavaScript and Python for real-time interaction.
Built secure local automation scripts for file management, application launching, and system-level workflows.
Designed a modular command-processing architecture enabling extensible AI-driven desktop automation.

ACHIEVEMENTS

Secured **1st Prize in Science Exhibition** during high school (Grades 8, 9, and 10)
Participated in (National Level India Skills Competition)

EDUCATION

Diploma in Computer Science & Engineering	10th Grade
GPT Mudhol (2023 – 2025)	MAM School, Terdal (2022)

CERTIFICATIONS

- * Generative AI Mastery Workshop – **OpenAI Academy / NxtWave (2025)**
- * Innovation & Design Thinking – **IBM (2024)**
- * Cybersecurity Analyst Job Simulation – **Tata (Forage)**
- * Python Programming Certification — **Infosys Springboard**
- * Java Programming Certification — **Infosys Springboard**

SOFT SKILLS

- * Problem-Solving
- * Team Leadership
- * Communication
- * Adaptability
- * Collaboration

INTERESTS

- * Ethical Hacking
- * Coding & Building Projects
- * Chess
